

Portfolio Research & Activity Log

Subash Lama - auto-generated journal

1 recorded day(s)

2026-07-04

Session 01:17

- Started tracking from this session (baseline set).

Research notes

- Reviewed the portfolio's SubashBot AI chatbot (cloudflare-worker/chat-worker.js): confirmed it does live intent-based OSINT lookups (CVE/NVD, IP reputation via AbuseIPDB, DNS resolution, Wayback Machine history, weather, sports predictions, resume/JD keyword optimization) on top of a Claude/Llama-based Q&A layer about Subash's background.

- Built a new activity-logging system per Subash's request: a ``scripts/log-session-start.py`` hook script that stamps a dated entry under ``activity-log/entries/``, records git commits/diff-stat since the last session, and regenerates a cumulative PDF via ``scripts/generate-activity-report.py`` (fpdf2-based).

- Decided against a fragile "call Claude headlessly from the hook" design for the narrative portion; instead the hook handles objective git facts automatically and deterministically, while narrative/research notes get added by the assistant directly during sessions ? more reliable and richer than a cold automated summary.

Session 01:19

- No new commits since the last session.
